

Electronica S.r.l.

Functional test

The wiring system is tested using special machines which issue a report on the wiring system's conformity with the parameters input into the appropriate test programme (provided by the client or generated by **Prestel Electronica S.r.l.** according to the requested parameters).

This equipment is regularly tested and validated using specific procedures designed by the production company.

Prestel Electronica S.r.l. have 4 automatic analyzers which perform continuity, insulation and dielectric tests on the wiring system in direct and alternate current:

DIT-MCO 9500 SERIES

- With 4.500 points of test

DIT-MCO 2115 SERIES

- With 1.000 points of test
- With 5.000 points of test
- With 8.000 points of test

Automeg MK

- With 4.900 points of test
